System Startup Guide

Professor-Industry Matching System

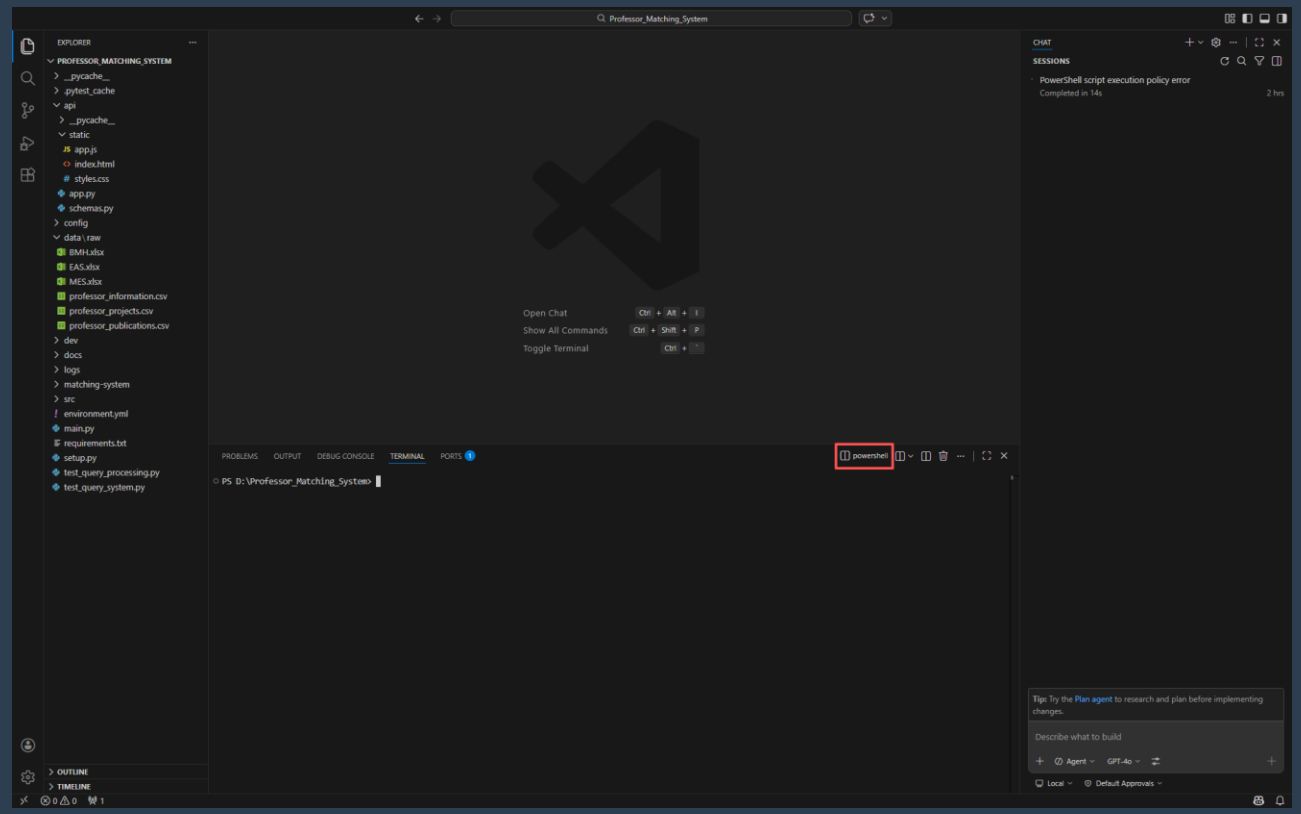
OKT Server PC | v2.0.0

Step 1: Open VSCode

- Click on the icon on the desktop. The launcher icon looks like this:

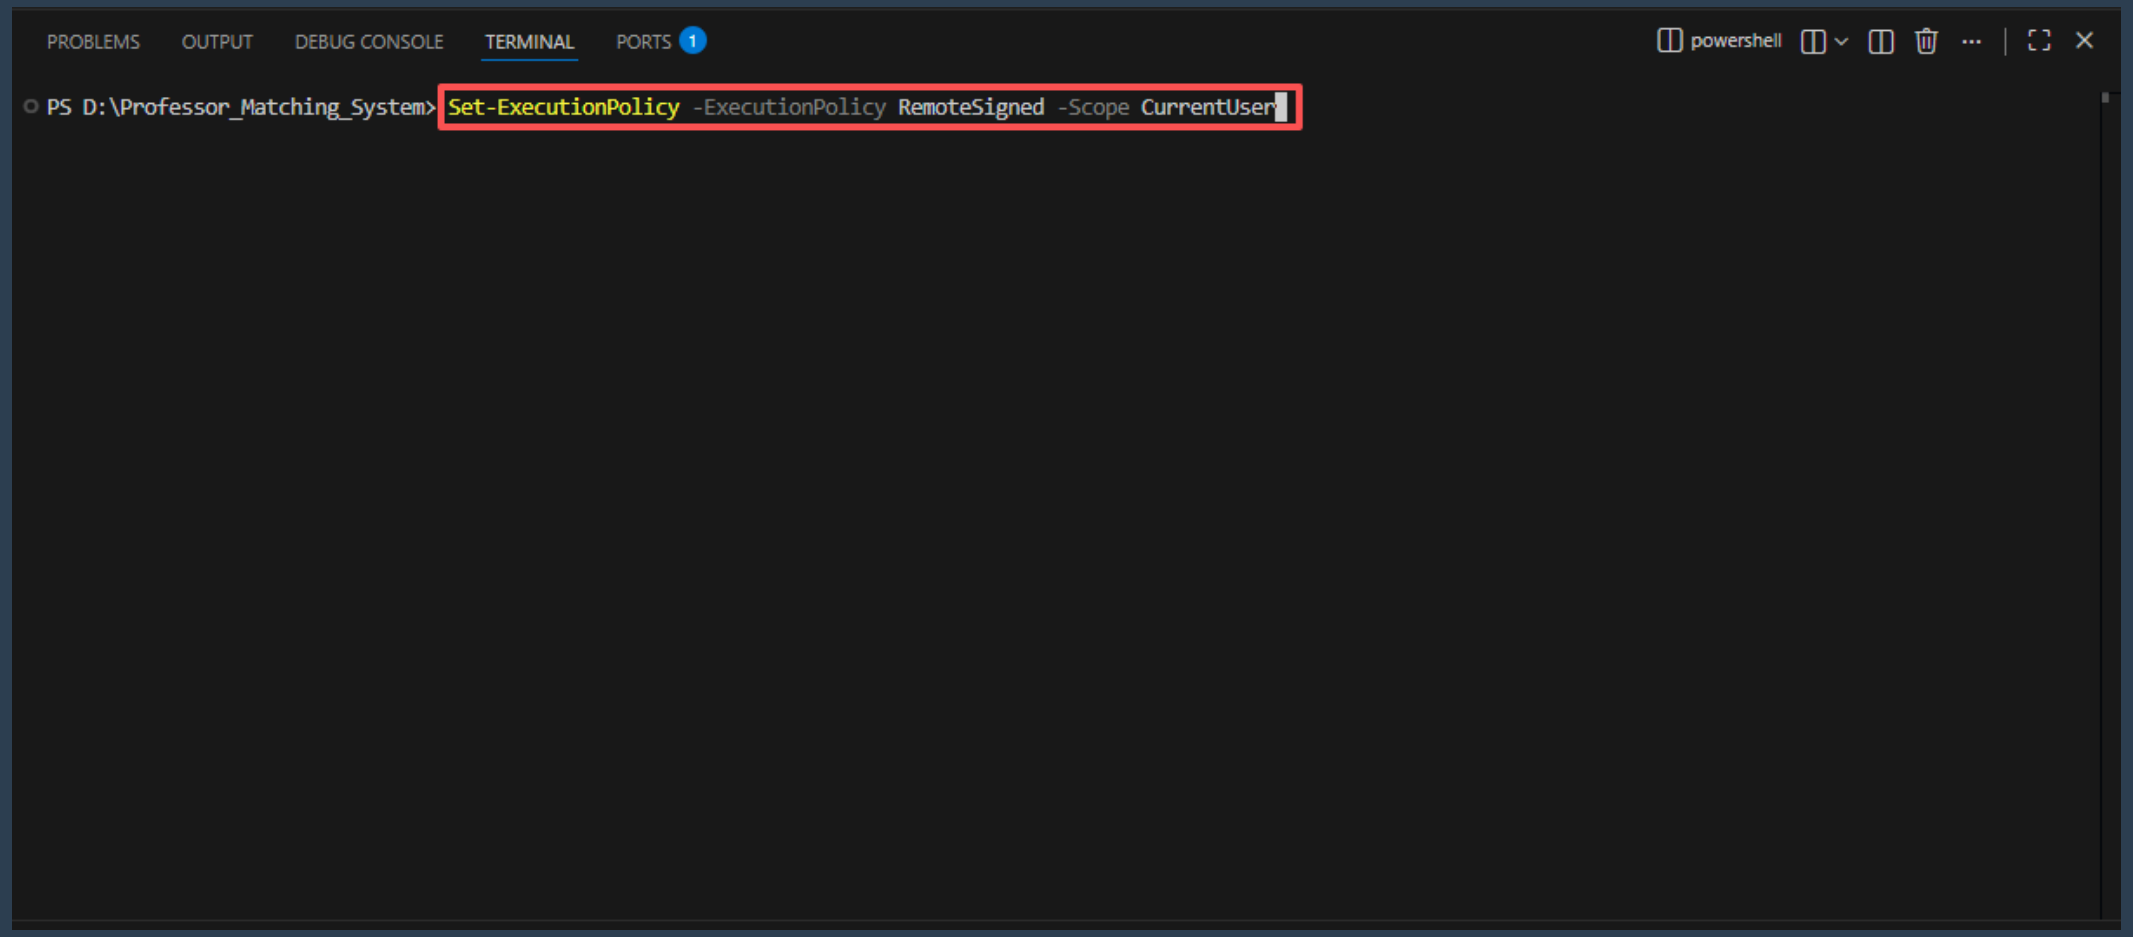
Step 2: Launch the Powershell

- After entering Microsoft VSCode, wait for the software to finish the initialization.
- When ready, press **Ctrl + J** to open a terminal. It will show 'powershell' in the upper right corner by default.



Step 3: Enable Scripts Authority

Type the command below to enable powershell script execution, then press `Enter`.



Step 4: Activate Virtual Environment

After enabling authority, run the command below to activate our matching system's virtual python environment.

```
PROBLEMS   OUTPUT   DEBUG CONSOLE   TERMINAL   PORTS 1                                   powershell

PS D:\Professor_Matching_System> Set-ExecutionPolicy -ExecutionPolicy RemoteSigned -Scope CurrentUser
PS D:\Professor_Matching_System> matching-system\Scripts\Activate.ps1
```

Step 5: Launch the System

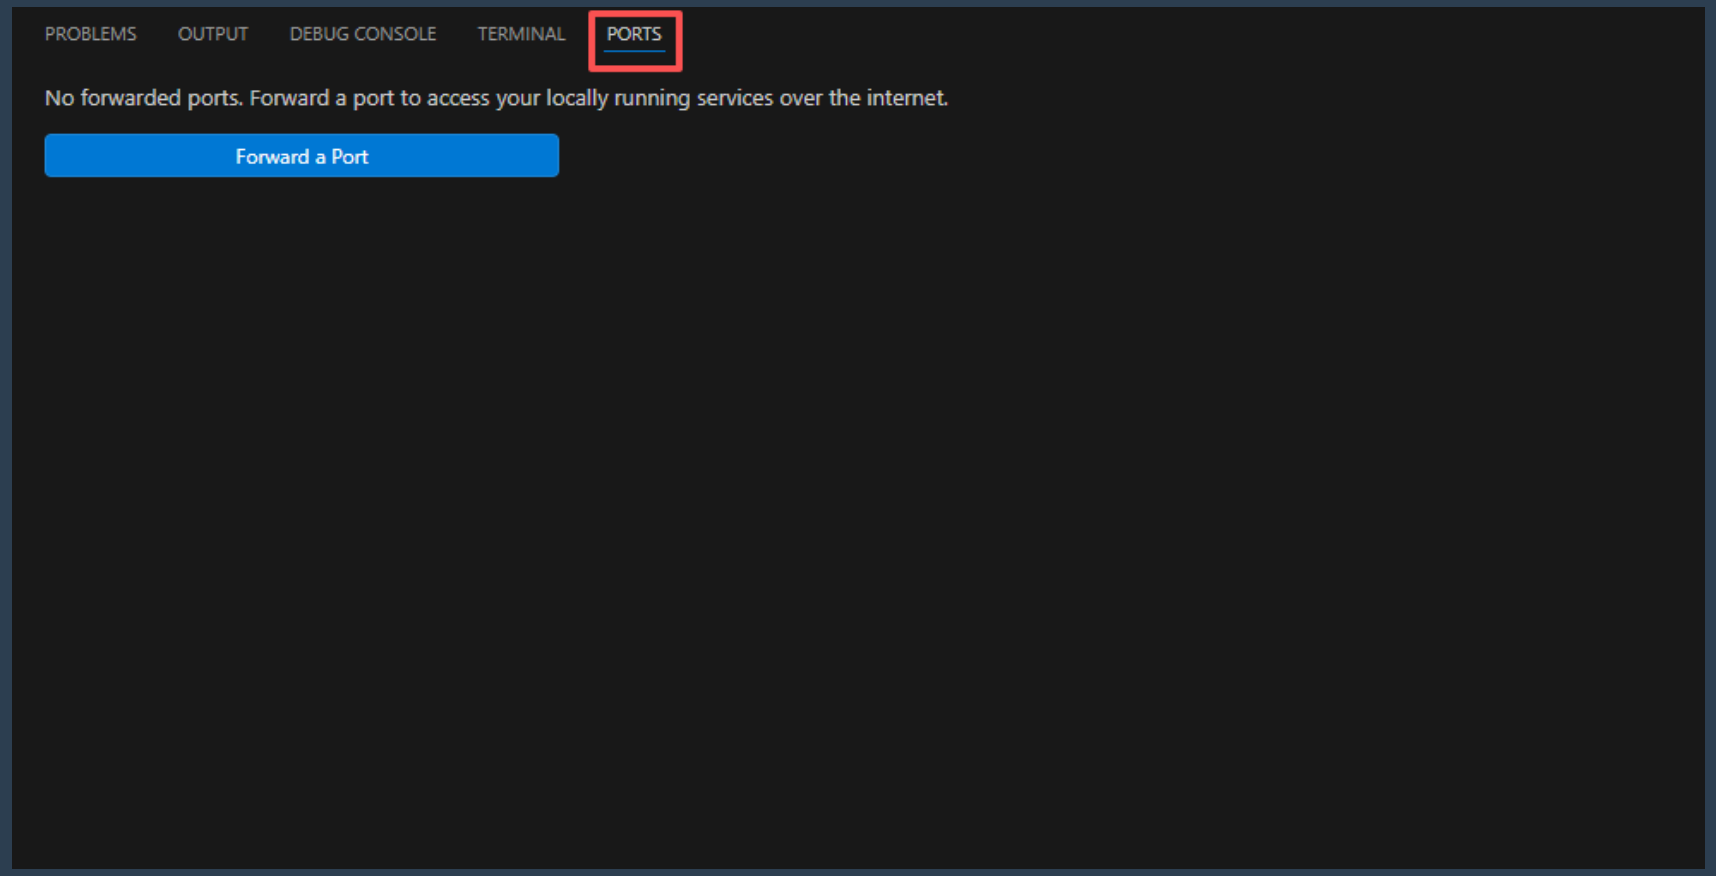
After seeing the **(matching-system)** pattern on the left inside the powershell, execute the command below to launch our matching system.

```
PROBLEMS   OUTPUT   DEBUG CONSOLE   TERMINAL   PORTS 1                                   powershell

PS D:\Professor_Matching_System> Set-ExecutionPolicy -ExecutionPolicy RemoteSigned -Scope CurrentUser
PS D:\Professor_Matching_System> matching-system\Scripts\Activate.ps1
(matching-system) PS D:\Professor_Matching_System> uvicorn api.app:app --reload
```

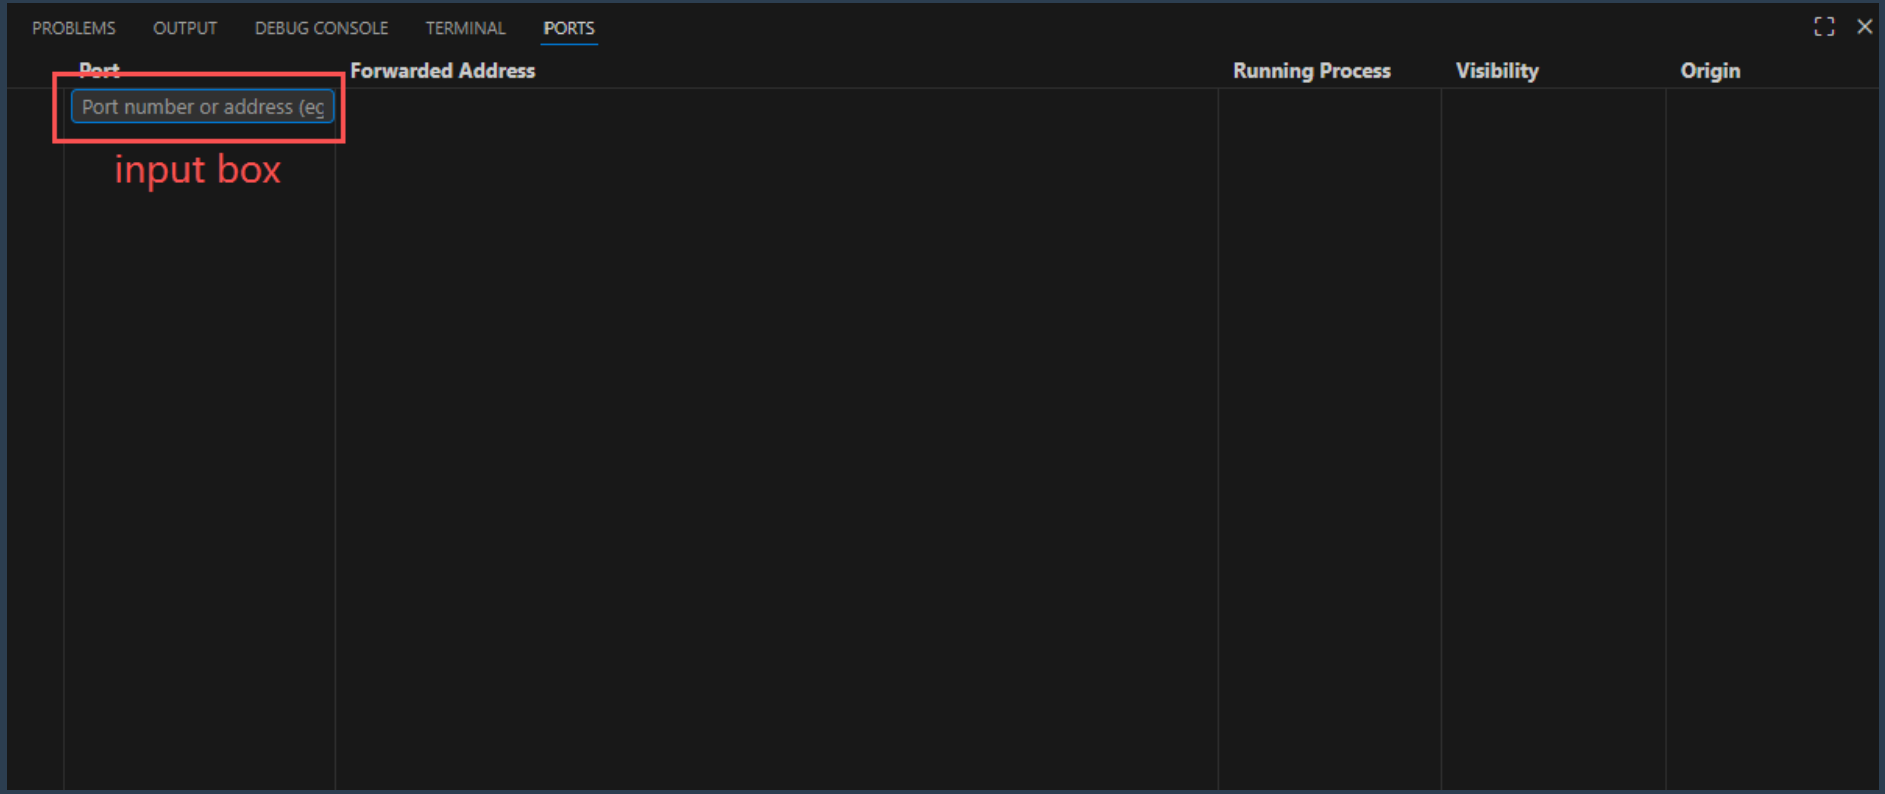
Step 6: Broadcast Local Port

Go to **PORT** area of the terminal in VSCode



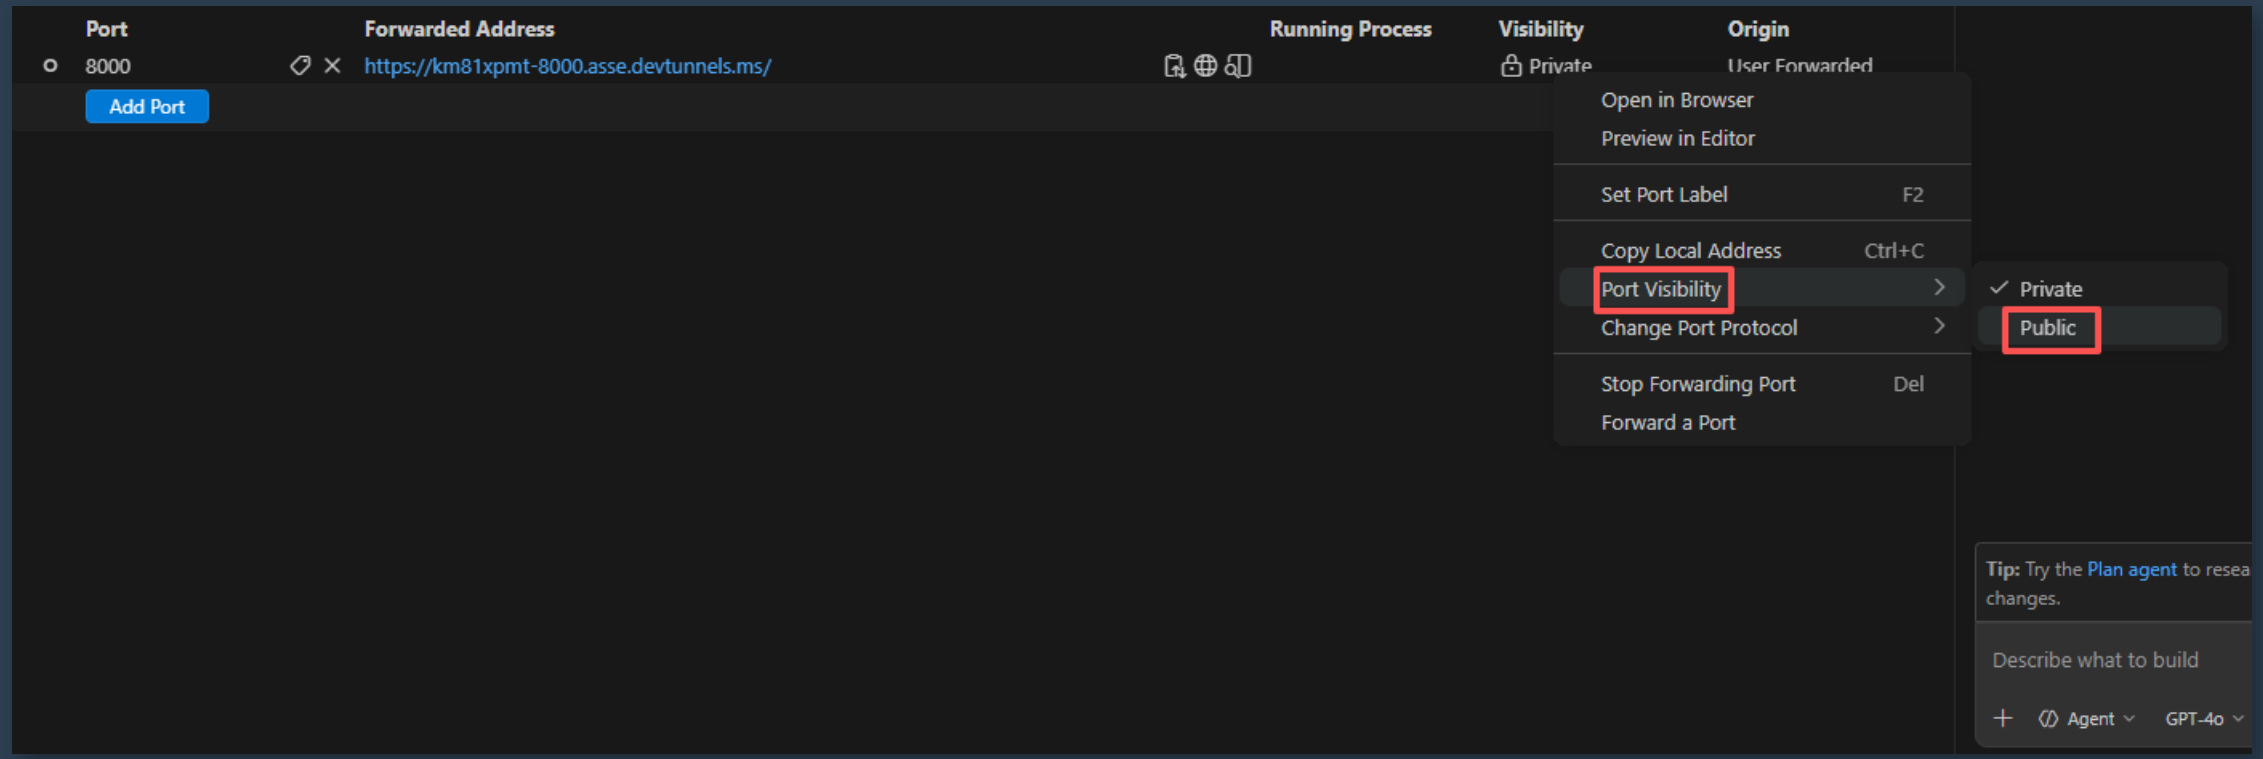
Step 6: Broadcast Local Port (Cont.)

- Click **Forward a Port** button, and you can see the following interface. Enter **8000** inside the input box, then press enter.



Step 6: Broadcast Local Port (Cont.)

- Right click on the **Private** lock, and turn the Visibility to **Public**.



Step 6: Broadcast Local Port (Cont.)

- Press Ctrl and click the forwarded address. Press `Open`. Now everyone can access this system via the corresponding global address.
